

Do Insects Transmit AIDS? (Paperback)

By Lawrence Miike, Of Technology Assessment Office of Technology Assessment

University Press of the Pacific, United States, 2005. Paperback. Book Condition: New. 279 x 210 mm. Language: English . Brand New Book ***** Print on Demand *****.Infections of HIV (Human Immunodeficiency Virus), the virus that causes AIDS, are spreading rapidly among intravenous drug users, and there have been rare occasions in which health care workers became infected after being accidentally stuck with contaminated needles. If infection can occur by these routes, is it possible for the AIDS virus to be transmitted from an infected to an uninfected person by biting insects? What evidence is there for actual transmission by insects? If insect transmission is possible, how serious is the threat, and what research is being conducted and could be conducted that could answer these questions? Inquiries into whether insect transmission of HIV could occur fall into two general categories. First, field and laboratory studies of insects can determine: 1) whether their feeding/biting habits are compatible with their possible role as vectors of HIV transmission, 2) whether these insects are capable of drawing up and transmitting enough virus to cause infection, and 3) whether the microbiology of the virus in the insect is conducive to transmission. Second, epidemiological studies can be...

Reviews

This book will be worth getting. Better than never, though i am quite late in start reading this one. Its been written in an extremely basic way which is only right after i finished reading this book through which actually altered me, alter the way i believe.

-- **Mr. Enrico Lesch**

The ideal book i possibly read. It is among the most remarkable pdf i have go through. I am easily could get a enjoyment of reading through a created ebook.
