

The Heavier d-Block Metals: Aspects of Inorganic and Coordination Chemistry (Paperback)

By Professor of Inorganic Chemistry Catherine E Housecroft

Oxford University Press, United Kingdom, 1999. Paperback. Book Condition: New. 230 x 184 mm. Language: English . Brand New Book ***** Print on Demand *****.This book addresses the chemistry of the second and third row d-block metals, assuming a knowledge of the chemistry of the first row metals. Chapter 1 looks at the metals and summarizes occurrence, physical properties and uses. Chapter 2 considers periodic trends in properties. Chapter 3 considers aqueous solution chemistry, species present (with comparisons of the first row metal ions) and redox properties. Chapter 4 surveys structure: the range of coordination numbers shown by second and third row metals is often a topic for discussion in University courses. Chapter 5 looks at electronic spectra and magnetic properties, making comparisons with the first row the main objective of the chapter. Detailed mathematical treatments are not given. Chapter 6 considers metal-metal bonding, and the classes of compound that contain triple and quadruple bonds; the role of bridging ligands is introduced. Chapter 7 looks at selected clusters with a pi donor ligands (e.g. metal halo species) in which metal-metal bonding is important. Chapter 8 introduces the area of polyoxometallates, closing with a short discussion of the wide range of...

Reviews

This book will be worth buying. Better than never, though i am quite late in start reading this one. You may like how the blogger compose this publication.

-- Mrs. Kylie Oberbrunner II

A must buy book if you need to adding benefit. It really is simplified but unexpected situations in the 50 percent of your book. Its been developed in an exceptionally straightforward way and it is merely soon after i finished reading through this pdf where in fact transformed me, modify the way i think.
