Springer. Hardcover. Book Condition: New. Hardcover. 239 pages. Dimensions: 9.2in. x 6.1in. x 0.7in. This book describes the state of the art on the luminescent properties of porous silicon. The dramatic results of the major international laboratories and groups working in this subject are presented. The majority of the participants agree that a quantum confinement effect and a good passivation of the surface crystallites are responsible for the observed luminescence properties. New characterisation techniques are for the first time presented as...
