Cuvillier Verlag Sep 2015, 2015. Taschenbuch. Book Condition: Neu. 211x146x17 mm. Neuware - Salt tolerance is a complex trait that involves biochemical, physiological and morphological modifications that are regulated at the molecular level. The aim of this work was to understand the effects of salinity on *P. euphratica*, a salt tolerant species. For this purpose ecophysiological and molecular methods were applied and necessary comparisons were conducted with *P. x canescens*, a salt sensitive species or *A. thaliana*, the model plant for herbaceous species. The present work shows that *P. euphratica* under salinity is able to protect its plasma membrane and maintain quantum yield efficiency of PSII. Molecular analysis showed that the expression levels of two genes were increased in response to salinity (TIL and SIS) in both *P. euphratica* (PeuTIL) and *P. x canescens* (PcaTIL). These genes were characterized to study their functions with respect to salt tolerance. In both root and leaf, PeuTIL was up-regulated after salt stress and decreased to the control level within few hours. Comparison of PeuTIL and PcaTIL showed that the transcript level of TIL in *P. euphratica* was significantly higher than that of its homolog in *P. x canescens* both under control conditions and salt stress. It has also been found that the expression of...

Reviews

Very helpful to all of group of men and women. It can be written in easy terms instead of confusing. You will like how the writer writes this book.

-- **Dr. Daren Mitchell PhD**

I just started off reading this article pdf. Yes, it can be engaging, nonetheless an interesting and amazing literature. I am effortlessly getting a satisfaction of reading a written publication.
